

Gondola Studio version 1.6

Greetings from the Gondola team,

We're happy to announce the release of Gondola Studio 1.6.

Gondola Studio UI/UX improvements

- **Gondola Spreadsheet Editor (GSE) is now Gondola Test Designer (GTD):** With the new name, Gondola Test Designer takes on a more strategic role – empowering testers to create high-volumes of tests in various formats, including but not limited to the spreadsheet format.
- **GTD Block Indentations:** With our new improved block indentations, your tests are even easier to read and understand.
- **Test Execution:** The Test Execution Dialog allows you to easily configure and run your tests, and you can also quickly run your tests from the VS Code Explorer context menu.
- **Action Modules:** Keep your user-defined actions in one place with Gondola Action Modules. These Action Modules are not tied to a page object therefore they can be reused across pages.

Web Test Builder Beta Release

Record actions from your browser directly into Gondola. Gondola Studio and the newly minted TestArchitect Web Recorder now support recording the following actions:

- navigate (on startup)
- wait for property – check control property
- wait for element – wait for element disappear
- check control exist – check control not exist
- check window exist
- click – right click – double click
- enter – type
- set checkbox – set radio button
- select combobox
- switch frame

Enhanced Automation Platform Coverage

- **Native Mobile Applications**
 - Android 8, 9, 10
 - iOS 13.4, 13.5
- **Mobile Browsers**
 - Safari iOS stable version 13.5 & 13.4.1
