

In-App Assistant

Smart Wait

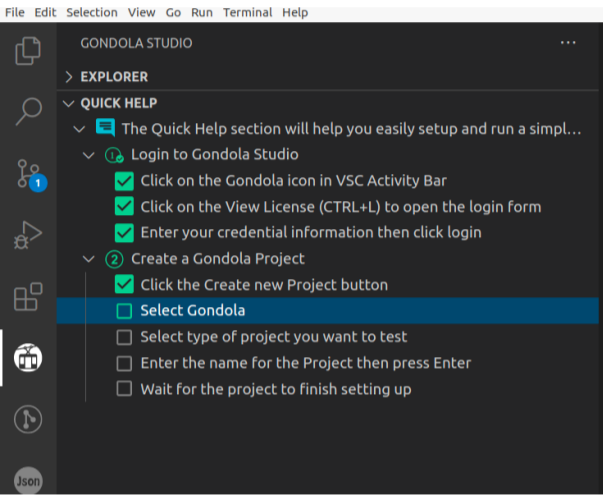

Metadata "Tags"

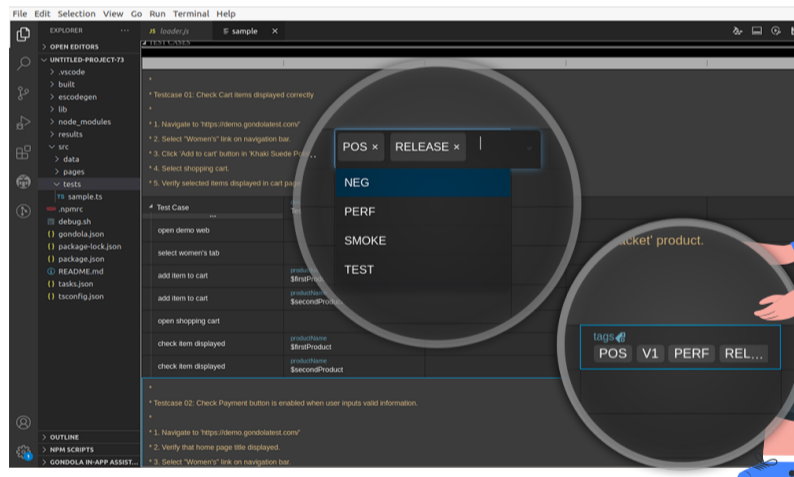

**WHAT'S NEW:**

 **New Gondola In-App Assistant**

- The In-App Assistant guides you through getting started with Gondola right after installing Gondola Studio extension 1.6 Update 2 without consulting Gondola Docs, specifically for the Web ABT project template, from compiling and executing tests to reviewing test results.
- Moving forward, the In-App Assistant will have a much better look-and-feel and assist you in becoming productive with more types of Gondola projects.

 **Notable Improvements**

**• Gondola Test Designer UI/UX improvements:**

The metadata "Tag" has been moved to the "Test Case" header to preserve more room for test lines which are the main content of a test case.

You'll also find it easier to add/remove tags for the test cases directly in the "Tag" cell with auto-suggestions.

- **Gondola Framework** is still continuously being improved with a new Smart Wait for the main built-in interactive keywords like mouse/touch events, enter keyboard/fullfield and checkpoint keywords related to the element locators. This Smart Wait will significantly improve script stability.
- Gondola Studio 1.6 Update 2 has been tested on the following browsers and native app platforms:

**Firefox:** 81, 80  
**Chrome:** 85, 84  
**Edge Chromium:** 85, 84  
**Android Native:** 8.1, 9, 10  
**Chrome on Android:** 85, 84

**Safari**  
 • 13.1.2 on MAC OSX 10.14.6, 10.15.6  
 • 13.0.5 on MAC OSX 10.14.6,

**Native and Safari browser on iOS**  
 • 13.7  
 • 13.6

The Gondola Studio extension version 1.6 Update 2 is available at:
